

Arrays

- Arrays is defines as collection of similar data types.

- *Declaration* of arrays is as follows `int A[5] ;`
- Each location can be *accessed* as `A[0] = 27;`
`A[1] = 10;`

- The array will be created in the *main memory* if inside a function
- The Declaration and Initialisation of array is as follows

`Int B[5] = { 2, 9, 6, 8, 10 } ;`

- You can also access each element of array using *for loop*
