

Reference

- A reference is a just another name for the same the variable

Example :

```
Int main( )  
{  
    Int a = 10;  
    Int &r = a;    - syntax of reference  
    Count << a ;  
    r++;  
    Cout<< r ;  
    Cout << a ;  
}
```

- This is use for parameter passing
- For writing small functions we use reference
