Nested Recursion

- A recursive function will pass parameter as a recursive call is called nested recursion

- A recursive function taking recursive call as its parameter is called nested recursion

Example :

```
int fun(int n)
{
    if(n>100)
        return n -10;
    else
        return fun(fun (fun(n+11)));
}
fun(95)
```
